Haylemeskel Bantiyerga | *Software Engineer | AI Engineer*

bantiyerga27@gmail.com | Washington DC, USA | Haylemeskel | hayle-hb

SUMMARY

Software Engineer with 5+ years of experience building scalable full-stack, backend, distributed, and cloud applications. Experienced in Python, C#, TypeScript, JavaScript, React, Next.js, FastAPI, ASP.NET Core, REST APIs, microservices, SQL/NoSQL databases, Docker, Kubernetes, RabbitMQ, Redis, and AWS. Strong background in system design, application scalability, reliability, CI/CD, and performance optimization, including production services supporting 50K+ daily requests. Additional experience building AI-powered applications and LLM-based workflows.

SKILLS

Artificial Intelligence (AI): RAG, LLMs, LangChain, LangGraph, Vercel AI SDK, AI Agents, Agentic Workflows, Tool Calling, Function Calling, Embeddings, Vector Search, Prompt Engineering, Context Engineering, Structured Outputs, AI Evaluation, LLM Observability

Languages: TypeScript, Python, JavaScript, C#, C++, Java, Go, SQL, HTML/CSS, JSON, Bash

Backend & Distributed Systems: ASP.NET Core, FastAPI, REST APIs, Microservices, Distributed Systems, System Design, Concurrency, RabbitMQ, Redis, Caching

Cloud & Infrastructure: AWS (S3, Lambda, ECS), Docker, Kubernetes, CI/CD, Data Structures & Algorithms, Operating Systems, Networking, Database Systems

PROFESSIONAL EXPERIENCE

AI Full Stack Engineer, *Hahu Cloud* 11/2023 – 06/2025 | Addis Ababa, Ethiopia

- Supported 100K+ monthly AI requests by building production-ready AI application services and APIs with Python, FastAPI, SQL/NoSQL, and microservices, integrating LLMs, structured outputs, and enterprise APIs/data sources into scalable application workflows.
- Reduced AI workflow latency by 35% by engineering asynchronous, multi-step processing pipelines with RabbitMQ, Redis, Celery, Docker, and Kubernetes, enabling tool calling, context management, and reliable distributed execution.
- Cut deployment effort by 60% by implementing CI/CD, automated testing, authentication, monitoring, observability, and fault-tolerant infrastructure across AI services, improving production reliability and operational visibility.

Software Engineer, *Telebirr* 07/2020 – 10/2023 | Addis Ababa, Ethiopia

- Supported 100K+ monthly AI interactions by building full-stack AI services with TypeScript, React, Next.js, Python, FastAPI, and SQL/NoSQL, integrating LLM workflows with enterprise data.
- Reduced AI workflow latency by 35% by engineering agentic, asynchronous workflows with RabbitMQ, Redis, Celery, Docker, and Kubernetes, enabling tool calling, context management, and structured outputs.
- Cut deployment effort by 60% by implementing CI/CD, automated testing, authentication, monitoring, logging, and observability, improving AI service reliability, security, and production readiness.

EDUCATION

B.Sc. in Software Engineering, *Addis Ababa Science and Technology University* Addis Ababa, Ethiopia

Core Coursework: Distributed Systems, Software Architecture, Database Systems, Computer Networks, Algorithms & Data Structures, Artificial Intelligence, Web Application Development

AWARDS AND EXTRACURRICULARS

Global GAIAthon Hackathon Winner ($3,000 Prize), *Edenway Foundations (Accra, Ghana)* 07/28/2025

- Engineered a high-throughput distributed data-processing architecture using C++ and Python, processing 10K+ IoT sensor data points/minute with sub-second stream-processing latency, enabling near-real-time AI insights while optimizing compute and infrastructure utilization.
